

What I claim is:

1. (currently amended) A shade and rain umbrella combination including a basic umbrella having a shaft and expanding ribs at a top of said shaft, a shade cover placed over said ribs and fastened to a peripheral point at the end of said ribs, said shade cover consisting of a woven mesh fabric for protection against ultraviolet rays of the sun but at the same time allowing ventilation air to pass through said fabric, a separable water proof rain cover is placed over said shade cover in the event of rain, said rain cover is substantially the same size as said shade cover, means for fastening said rain cover to said peripheral point at each of the ends of said ribs, whereby said shade cover is used in sunshine and said rain cover is added in the event of rain but kept separate otherwise.

4. (original) The umbrella combination of claim 1, wherein said means for fastening are flexible eyelets on said rain cover placed over each point at each end of said ribs.

9. (original) The umbrella combination of claim 1 including means for clamping said shaft in an upright position on an object.

10. (original) The umbrella combination of claim 9, wherein said means for clamping has a form of a C-shape clamp.

11. (original) The umbrella combination of claim 10, wherein said C-shape clamp has means thereon for orienting and clamping said C-shape clamp in two different directions.
